

Diploma Supplement MSc International Development Studies

The purpose of the Diploma Supplement is to provide sufficient independent data to improve the international 'transparency' and fair academic and professional recognition of qualifications (diplomas, degrees, certificates etc.). It is designed to provide a description of the nature, level, context, content and status of the studies that were pursued and successfully completed by the individual named on the original qualification to which this supplement is appended. It is free from any value judgements, equivalence statements or suggestions about recognition. This Diploma Supplement model was developed by the European Commission, Council of Europe and UNESCO.

1 INFORMATION IDENTIFYING THE HOLDER OF THE QUALIFICATION

1.1 Last name(s) Last

1.2 First name(s) First

- 1.3 Date of Birth (day/month/year) 10 January 1999
- 1.4 Student identification number or code 1234567

2 INFORMATION IDENTIFYING THE QUALIFICATION

2.1	Name of qualification and title	
	conferred (in original language)	
	Master of Science in	International Development Studies

Students who have successfully completed a Master study programme at Wageningen University are entitled to work as an engineer (ir) or as a Master of Science. No further certification is required.

2.2	Main field(s) of study for the qualification	
	MSc programme in	International Development Studies
	Specialisation	Economics of Development
2.3	Name and status of the awarding institution (in original language)	Wageningen University; public university, state recognised
2.4	Name and status of institution (if different from 2.3) administering studies (in original language)	See 2.3
2.5	Language(s) of instruction/ examination	English.

3 INFORMATION ON THE LEVEL AND DURATION OF THE QUALIFICATION

3.1	Level of the qualification	Second cycle National Qualifications Framework for Higher Education; Level 7 NLQF and EQF for LLL.
3.2	Official duration of programme in credits and/or years	The official duration of the programme is 120 ECTS, which equals two years of study. One ECTS equals 28 hours of study, according to the European Credit Transfer and Accumulation System.
3.3	Access requirement(s)	For admission to a Master's study programme, the student must possess a relevant Bachelor's degree. The supplement to the Education and Examination Regulations of the Master's study programmes WU contains the list of Bachelor's degrees that provide admission to one or more contiguous Master's study programmes. For admission to a non-contiguous Master's study programme, the student must have proof of admission to the relevant Master's study programme. This proof of admission is granted by the Executive Board. The proof of admission to the non-contiguous Master's study programmes is provided if the admission requirements are satisfied.

4 INFORMATION ON THE PROGRAMME COMPLETED AND THE RESULTS OBTAINED

- 4.1 Mode of study
- 4.2 Programme learning outcomes

Full time Master programme

Learning Outcomes

- After successful completion of this MSc programme graduates are expected to be able to:
- analyse social transformation processes related to livelihoods, agro-food networks, and the environment within a dynamic international context, at different levels and in a comparative perspective, with special attention to inclusion and exclusion processes, equity and unequal access to resources;
- appreciate the relevance of theories and research approaches stemming from different disciplinary traditions within international development studies;
- assess and apply theoretical and methodological perspectives from one of the specializations (Sociology of Development, Economics of Development, Inclusive Innovation, Communication and Development, or Politics and Governance of Development) to analyse themes and problems within the domain of international development studies;
- assess the changing relationships and (potential) conflicts between different stakeholders in various settings;
- design and assess research in the domain of international development studies, including formulating a problem statement and operationalising objectives and research questions within a coherent research plan;
- select and apply appropriate methods and techniques to collect and analyse data from literature and empirical research in the domain of international development studies;
- critically reflect upon the functioning of policies and intervention strategies within the domain of international development studies, including the interaction with research and taking into account different stakeholder positions;
- critically reflect upon the different roles of the specialist in international development studies, including the ethical and value-driven aspects of research and intervention strategies;
- communicate convincingly (verbally and in writing) about (own) research and project results, and their rational underpinning, with a diverse audience including stakeholders involved, policy makers and scientists;
- co-operate as a specialist in multidisciplinary teams and diverse organisational settings within an international working environment, taking into consideration the complex contexts of the domain of international development studies;
- design and plan their own learning path based on continuous reflection (both individually and in discussions with others) upon personal knowledge, skills, attitudes and functioning.

4.3 Programme details, individual credits gained and grades/marks obtained

The following list shows all the courses of the programme the student has attended. It states the course, its number of credits, and the final mark the student obtained for it.

Subject	Description	ECTS credits	Mark
Common pa	rt		
SDC36306 Perspectives and Themes in International Development Studies		6	8.0
CPT36806	Critical Reflection on Research in International Development Practice	6	8.5
DEC70424	MSc Internship Development Economics	30	8.5
YMC60809	Academic Consultancy Training	9	8.5
ELS65600	Scientific Writing Skills	1.5	9.0
ELS66600	Academic Argumentation in Scientific Writing and Debate	1.5	6.5
Specialisati	on: Economics of Development		
YSS34306	Advanced Econometrics	6	7.5
DEC32806	Impact Assessment of Policies and Programmes	6	8.0
DEC30306	Central Themes in Economics of Development	6	7.5
DEC80436	MSc Thesis Development Economics	36	9.0
Electives			
CPT50306	Environmental Philosophy and Ecological Restoration	6	8.0
MAT20306	Advanced Statistics	6	8.5
	Total	120	

Subject (course unit code)

The subject refers to the course unit code in the study handbook.

Duration of course unit

The duration of the course unit is described in the study handbook. Wageningen University has 6 periods. These are divided in 4 periods of 8 weeks (12 credits) and 2 periods of 4 weeks (6 credits). Except thesis' and internships almost all courses have a duration of 1 period.

1 full academic year = 60 credits 1 period = 6 or 12 credits

4.4 Grading system and, if available, grade distribution table

The grading table requires universities to keep track of their grading practice and culture, which is good practice in many institutions across Europe.

The ECTS grading table allows for simple, transparent interpretation and conversion of grades from one system or context to another, and therefore does justice to the level of academic performance of all learners. Used correctly, it bridges different grading systems as well as different cultures in the European Higher Education Area and beyond.

The grading table gives the distribution of grades for this specific programme. It presents how many students (in percentages) receive a specific grade. This provides all necessary information to convert the grade in any local grading system. In case of too few results to calculate the distribution, the programme specific grading table is replaced by the BSc average grading table.

National / Wageningen University Grade	Total number awarded in reference group	Grading percentages International Development Studies*
10.0	8	0.3%
9.5	36	1.5%
9.0	173	7.2%
8.5	419	17.3%
8.0	633	26.2%
7.5	545	22.5%
7.0	366	15.1%
6.5	149	6.2%
6.0	90	3.7%
Total	2419	100%

* Based on the total number of grades awarded in the degree programme concerned (or average Wageningen University MSc programmes) during three preceding years.

4.5 Overall classification of the qualification (in original language) geslaagd cum laude passed cum laude

cum laude

When the successfully completed Masters examination indicates that the candidate has shown exceptional progress during his or her study, this can be shown on the certificate with the words 'cum laude'. See for more information the Education and Examination Regulations.

5 INFORMATION ON THE FUNCTION OF THE QUALIFICATION

5.1 Access to further study

A Master degree makes a student eligible for a PhD-programme.

5.2 Access to a regulated profession (if applicable)

6 ADDITIONAL INFORMATION

6.1Additional informationThe MSc programme International Development Studies is accredited on
29 June 2018 by the NVAO.

6.2 Further information sources

7 CERTIFICATION OF THE SUPPLEMENT

- 7.1 Date 31 August 2021
- 7.2 Signature

Mrs Ir I.M. (Ingrid) Hijmann

7.3 Capacity

Head Student Service Centre

7.4 Official stamp

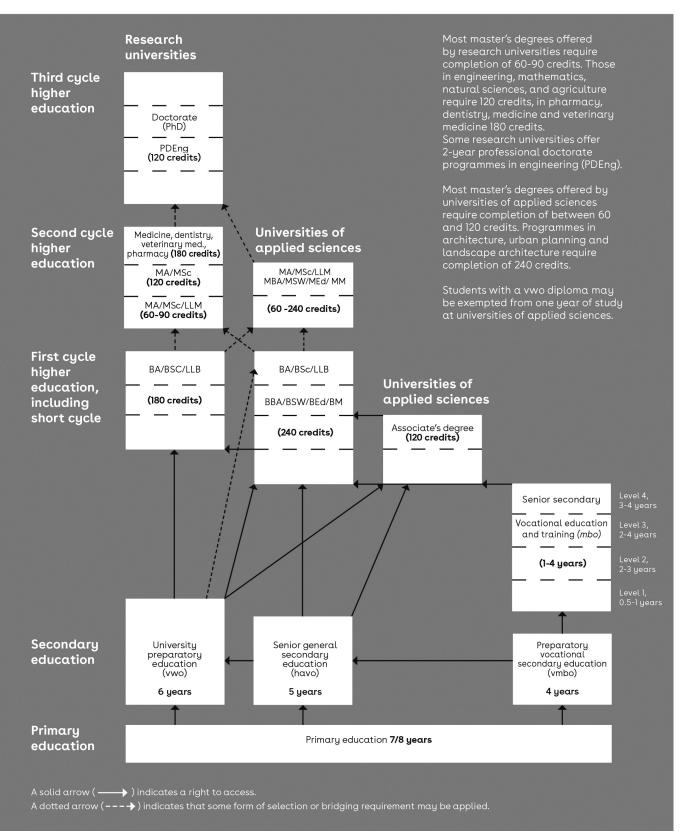

8 INFORMATION ON THE NATIONAL HIGHER EDUCATION SYSTEM

See enclosed description of the education system in the Netherlands.

The Dutch education system

The higher education system in the Netherlands is based on a three-cycle degree system, consisting of a bachelor, master and PhD. Two types of programmes are offered: research-oriented degree programmes offered by research universities, and professional higher education programmes offered by universities of applied sciences.

Higher education system in the Netherlands

Higher education in the Netherlands is organised around a three-cycle degree system, consisting of bachelor's, master's and PhD degrees. Two types of higher education programmes are offered: research-oriented degree programmes offered primarily by research universities, and professional higher education programmes offered primarily by universities of applied sciences.

Primary and secondary education

Access to higher education

Children are allowed to begin school at the age of four, but are not legally required to do so until the age of five. Primary education lasts eight years (of which seven are compulsory). During their last year, pupils are advised on the type of secondary education they should pursue.

Secondary education, which begins at the age of twelve and is compulsory until the age of sixteen, is offered in various forms and at different levels. Vmbo programmes (four years) combine general and vocational education and prepare pupils to go on to senior secondary vocational education and training (mbo), lasting one to four years. There are two types of general education that grant admission to higher education: havo (five years) and vwo (six years). Pupils are enrolled according to their ability. The last two years of havo and the last three years of vwo are referred to as the 'second phase' (tweede fase), or upper secondary education. During these years, pupils focus on one of four subject clusters (profielen), each of which emphasises a certain field of study in addition to satisfying the general education requirements. Each cluster is designed to prepare pupils for study at the tertiary level. A pupil enrolled at a vwo or havo school can choose from the following subject clusters:

- 1. Science and Technology (Natuur en Techniek)
- 2. Science and Health (Natuur en Gezondheid)
- 3. Economics and Society (Economie en Maatschappij)
- 4. Culture and Society (Cultuur en Maatschappij)

Only the six-year vwo diploma grants access to bachelor's programmes at research universities; the vwo diploma, havo diploma and the highest level of mbo grant access to bachelor's programmes at universities of applied sciences.

Higher education

Higher education in the Netherlands is offered at two types of institutions: research universities and universities of applied sciences. Research universities include general universities, universities specialising in engineering and agriculture, and the Open University. Universities of applied sciences include general institutions as well as institutions specialising in a specific field such as agriculture, fine and performing arts or teacher training.

Whereas research universities are primarily responsible for offering research-oriented programmes, universities of applied sciences are primarily responsible for offering

programmes of higher professional education, which prepare students for specific professions. These tend to be more practice oriented than programmes offered by research universities.

In this binary, three-cycle system, bachelor's, master's and PhD degrees are awarded. Short cycle higher education leading to the associate's degree is offered by universities of applied sciences. Degree programmes and periods of study are quantified in terms of the ECTS credit system.

The focus of degree programmes determines both the number of credits required to complete the programme and the degree which is awarded. A research-oriented bachelor's programme requires the completion of 180 credits (three years) and graduates obtain the degree Bachelor of Arts, Bachelor of Science, or Bachelor of Laws. (BA/BSc/LLB), depending on the discipline. In most cases, a bachelor's degree awarded in the applied arts and sciences requires 240 credits (four years), to complete. The majority of students obtain a BA/BSc/or LLB degree, but those graduating from programmes in business administration, social work, education and music may obtain a BBA/BSW/BEd or BM, respectively. Students who have a vwo diploma may be exempted from one year of study, allowing them to complete a bachelor's programme in the applied arts and sciences in three years (after completion of 180 credits). An associate's degree (Ad) in the applied arts and sciences requires 120 credits (two years), and students who complete the two-year programme can continue studying for a bachelor's degree in the applied arts and sciences.

A research-oriented master's programme requires the completion of 60, 90 or 120 credits (one, one-and-a-half or two years). In engineering, agriculture, and mathematics and the natural sciences, 120 credits are always required. Graduates obtain a Master of Arts, Master of Science, or Master of Laws (MA/MSc/LLM). A master's degree awarded in the applied arts and sciences requires the completion of 60 to 120 credits. The majority of students obtain an MA/MSc/or LLM degree, but those graduating from programmes in business administration, social work, education and music may obtain an MBA/MSW/MEd or MM, respectively.

The third cycle of higher education, leading to a PhD or to a Professional Doctorate in Engineering (PDEng), is offered only by research universities. The major requirement for the PhD, which is offered by all research universities, is completion of a dissertation based on original research that is publicly defended. In addition to PhD programmes, the three engineering universities offer technological designer programmes consisting of advanced study and a personal design assignment in a number of engineering fields. The technical designer programme requires two years of study to complete and graduates obtain the degree Professional Doctorate in Engineering (PDEng). The training of medical specialists is the responsibility of the professional group in an organisational setting at a university hospital.

Requirements for access to higher education

For access to research-oriented bachelor's programmes, students are required to have a vwo diploma or to have completed the first year (60 credits) of a bachelor's programme at a university of applied sciences. For the latter category of students, additional selection criteria may apply. The minimum access requirement to universities of applied sciences is either a

vwo diploma, a havo diploma or a diploma of secondary vocational education (mbo), provided certain conditions are met. The vwo diploma not only grants access to universities of applied sciences, but based on this diploma, students may receive exemption from one year of study as well. For access to both types of higher education, pupils with a vwo or havo diploma are required to have completed at least one of the subject clusters that fulfil the requirements for the higher education programme in question. A quotum, or *numerus fixus*, applies for access to certain programmes, primarily in the medical sciences. For *numerus fixus* programmes, institutions are permitted to select the students they admit based on academic performance, personal motivation, etc. Potential students older than 21 years who do not possess one of the qualifications mentioned above can qualify for access to higher education of prior learning). For access to certain programmes, particularly those in the fine arts, students have to demonstrate the required artistic abilities. The only access requirement for the Open University is that applicants be at least eighteen years of age.

For access to all master's programmes, a bachelor's degree in one or more specific disciplines is required, in some cases in combination with other requirements. Graduates with a bachelor's degree in the applied arts and sciences usually have to fulfil additional requirements for admission to a research-oriented master's programme.

Credit system and grading

A student's workload is measured in ECTS credits. According to Dutch law, one credit represents 28 hours of work and 60 credits represents one year of full-time study. The grading system used in the Netherlands is on a scale from 1 (very poor) to 10 (outstanding). The lowest passing grade is 6; 9s are seldom given and 10s are extremely rare. Grades 1-3 are hardly ever used. The academic year is 42 weeks long.

Quality assurance and accreditation

A guaranteed standard of higher education, and alignment with the Qualifications Framework for the European Higher Education Area, is maintained through a system of legal regulation and quality assurance, in the form of accreditation. The Ministry of Education, Culture and Science is responsible for legislation pertaining to education. The agriculture and public health ministries play an important role in monitoring the content of study programmes in their respective fields.

Quality assurance is carried out through a system of accreditation, administered by the <u>Accreditation Organisation of the Netherlands and Flanders (NVAO)</u>. According to the Dutch Higher Education Act, all degree programmes offered by research universities and universities of applied sciences must be evaluated according to established criteria. Programmes that meet the criteria are accredited: i.e. recognised for a period of six years. Only accredited programmes are eligible for government funding; students receive financial aid and graduate with a recognised degree only when enrolled in, and after having completed, an accredited degree programme. All accredited programmes are listed in the Central Register of Higher Education Study Programmes (CROHO).

As part of the accreditation system,, higher education institutions can request the NVAO to conduct an 'institutional quality assessment' to determine the extent to which the institution is capable of guaranteeing the quality of the programmes it offers. Programmes offered by institutions that receive a positive evaluation still have to be accredited, but the accreditation procedure takes less time and is not as extensive.

Besides the accreditation of degree programmes, the Netherlands has a system by which the Ministry of Education, Culture and Science recognises higher education institutions by conferring on them the status of either 'funded' or 'approved'. "Funded" indicates the institution is fully financed by the government. "Approved" indicates that the institution does not receive funds from the government and has to rely on its own sources of funding. Whether a degree programme is offered by a 'funded' or an 'approved' institution, it must be accredited and registered in CROHO to be considered recognised.

Please note: if a bachelor's or master's degree programme is not registered in CROHO, the quality is not assured by the Dutch quality assurance system. The quality may however be assured by another system.

National Qualifications Frameworks

An important tool to facilitate the recognition of foreign qualifications is using overarching qualifications frameworks as a translation tool through which qualifications awarded in one country can be compared to qualifications awarded abroad. A comprehensive overarching framework used in the European Economic Area is the European Qualifications Framework for Lifelong Learning (EQF-LLL). The EQF-LLL describes the learning outcomes associated with qualifications at eight different levels and is used as a common reference framework to assist in comparing national qualifications systems and their levels. The qualifications framework in the Netherlands is referred to as the Dutch Qualifications Framework (NLQF). The NLQF was officially referenced to the EQF in 2012. The NLQF has a total of nine levels: an "entry level" which is below level 1 of the EQF-LLL and therefore not referenced to the EQF-LLL, and 8 levels which are referenced to the 8 levels of the EQF. Further information on the Dutch Qualifications Framework can be found on the website of the <u>National Coordination Point</u> NLQF, which is the organization responsible for the development and implementation of the NLQF.
