

# Engineering Doctorate

'Design for AgriFood and Ecological Systems'

4TU.SAI

## **A two-year post-master designer programme in 'Design for AgriFood and Ecological Systems' which leads to an Engineering Doctorate (EngD)**

Have you finished your Master's and are you interested in technological designs? Do you want to continue studying and get paid while doing so? Then the designer programme 'Design for AgriFood and Ecological Systems' might suit you!

This programme is part of the partnership between the four technical universities (4TU) in the Netherlands under the auspices of the Stan Ackermans Institute ([www.4TU.nl/sai/](http://www.4TU.nl/sai/)).

The EngD programme has a focus on (technological) design in industry and society and will provide you with the

scientific background, design skills and personal development required to become one of the senior (technical) managers of the future.

The EngD programme is tailor made. The programme offers academic research and design in a professional context combining a training component (60 ECTS) and a supervised design assignment (60 ECTS).

### **WUR EngD programme:**
