

I worked for four months in StartHub Wageningen as my entrepreneurial internship. StartHub Wageningen is the start-up incubator and educator for not only current students but also PhD's and recent graduates of Wageningen University & Research. Their core aim is the development of entrepreneurial competences of student entrepreneurs.

During my internship, I have developed the competence tool. The tool consists of three components. These are incubation track environment, interactive competence information, and coaching process.

First, the incubation track environment has been set up in Microsoft Teams platform. So, coaches can communicate with entrepreneurs within this environment.

Second, I have developed a coaching process using EntreComp. Then, coaches can use EntreComp as a common reference for the entrepreneurial competence development.

Third, I have developed the interactive competence information which can help coaches/entrepreneurs easily navigate EntreComp competences:

<https://dorajistyle.github.io/EntreComp/>

It was definitely a great experience that combines academic knowledge into practice in a vibrant entrepreneurial environment.

Joongseob Kim (Master's student in Biosystems Engineering / Entrepreneurship Track)
