Sorbonne Université	Concurrent programming (3I001)		
Course description	Concurrent programming is becoming an issue since most devices (computers, phones, etc) now embed several cores or processors. The goal of this course is to provide students with the basics of concurrent programming and details the main mechanisms you can use in various languages to implement distributed algorithms. It is a good complement to a distributed algorithms course.		
Domain	Computer science		
Keywords	Thread	Concurrent programming	Concurrency in Java Shared data
Prerequisites	The knowledge of programming, and the use of an object oriented language is of importance. Java is briefly recalled at the beginning of the course but preliminary practice helps..		
Level	Bachelor (3rd year)		
Language	French with english subtitles		
Number of credits and workload	6 credits	5-7 hrs per week	77 hrs in total
Semester period and Start date course	Semester 1	Start date: 11-Sep-18	
Application deadline	10-Sep-18		
Full course description	The objective of this course is to address the main problems related to the development of competing programs. It also offers a first opening towards distributed algorithms. The main notions to be presented are: - The role of the language runtime (as a view on the operating system) in the execution of a program, - The notion of tasks, processes, and threads, -The problem of concurrent access to shared data, -The different mechanisms to protect shared data,-Communication mechanisms between threads, -The basics about the termination of a concurrent program,-The structure of a server program, - Some basics about concurrent algorithmic. Practice is performed using Java
