Our world is changing. The population is growing fast and prosperity is increasing in many regions. Around the world, land use for food production is reaching its limits. The climate is visibly changing while fossil fuels are becoming ever scarcer. Meanwhile, people are attaching more importance to healthy, safe and sufficient food.

It is this changing world that is the real specialisation of Wageningen University & Research – the domain of good and safe food & food production, food security and a healthy living environment. In essence we not only develop knowledge but also help to apply it.

Our mission is: ‘To explore the potential of nature to improve the quality of life’. This is achieved together with industry, governments and research institutes around the world. In addition to our renowned fundamental research, Wageningen University & Research also has a strong global position as a supplier of application-oriented and field-based research. At the same
time, we educate many thousands of students from over a hundred countries to be professionals in the domain of ‘healthy food and living environment’ every year.

This combination of research, education and value creation has made us internationally successful. It is with good reason that we have a very high success rate in attracting EU funds for research and score so highly in international rankings and citation indexes. This is due to the Wageningen approach – the joint strengths of the university and specialised research institutes and the connections between our scientific, technological and social disciplines. Furthermore, we are well aware that our partners – governments, companies, NGO’s and research institutes at home and abroad – need to achieve genuine social breakthroughs. This is also why we cooperate on a large scale in public-private partnerships, as well as in confidential contract research.

Together we aim to continue to lead the way, bundling financial flows and using our knowledge to design applicable solutions for the major challenges faced by the world. This is the ultimate ambition of Wageningen University & Research.
Global issues
In September 2015 the United Nations adopted the Sustainable Development Goals (SDG’s). 17 goals and 169 targets setting the agenda for people, planet and prosperity for the next 15 years. Not only the United Nations, but also national authorities, civic society, business and research organisations commit their efforts towards the SDGs. The Sustainable Development Goals are aimed at an array of issues that include slashing poverty, hunger, disease, gender inequality, and improving access to water and sanitation. Much of the research of Wageningen University & Research is connected with the Sustainable Development Goals, some of the major targets are listed below. The SDGs also provide guidelines for new research projects and programmes and collaborations with our partners.

- End hunger, achieve food security and improved nutrition and promote sustainable agriculture.
- Ensure healthy lives and promote well being for all at all ages.
- Ensure availability and sustainable management of water and sanitation for all.
- Ensure access to affordable, reliable, sustainable and modern energy for all.
- Make cities and human settlements inclusive, safe, resilient and sustainable.
• Ensure sustainable consumption and production patterns.
• Take urgent action to combat climate change and its impacts.
• Conserve and sustainably use the oceans, seas and marine resources for sustainable development.
• Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss.

Our approach

Food: Focusing on the total system: careful production and processing of healthy food, sustainable use of soil, water and atmosphere, reduction of inputs of nutrients, auxiliary chemicals and pesticides, and reduction of greenhouse gas emissions, with special attention to sustainability and animal welfare.

Liveable metropolis: Generating metropolitan solutions in order to arrive at smart cities: cities and metropolitan regions that – in close relationship with the surrounding rural areas – are liveable, healthy, resilient and circular.
Clean water: Improving sustainable use and management of ground and surface water, contributing to water purification and tackling salinisation.

Biodiversity: Acquiring insight into System Earth’s capacity for recovery, and possibilities to improve that capacity locally and regionally.

Circular economy: Facilitating the transition to a circular economy founded on biobased raw materials, and studying the social and economic consequences of feed-food-fuel choices.

Well-being: Improving food products and production processes, enhancing healthy choice behaviour and acquiring insight into the role of cultural and behavioural factors.

Wageningen University & Research not only develops knowledge but also helps to apply it
The campus

The major part of Wageningen University & Research is located on Wageningen Campus. The campus is focused on meeting and contact between knowledge organisations, educational institutions, the business community and start-ups. With the research institutes of Wageningen University & Research, national and international R&D companies such as FrieslandCampina, Noldus, Unilever, Yili, Kikkoman and Keygene, research institutes such as NIOO, educational institutes such as the university and the Aeres University of Applied Sciences and numerous SMEs and start-ups, the campus offers the perfect climate for innovative solutions. Wageningen Campus offers a range of facilities and amenities. Companies and organisations are able to set up in a business complex or incubator. They can also utilise top-quality shared research facilities.

Other Dutch locations

While our name suggests that we are located solely in Wageningen, we also have research and experimental facilities in more than 25 different places throughout the Netherlands. Lelystad is the site of our research into animal diseases and arable farming, for example, while ecological marine research is concentrated in the coastal towns of Den Helder, IJmuiden and Yerseke.

The campus is increasingly taking on the function of a flywheel for innovation
Abroad
Wageningen University & Research is active in many regions in the world. From China to Chile and from Ethiopia to the Arctic, we work together with partners in research programmes. The goal is to improve food safety and food security, develop biobased products, materials and logistics chains, and determine the impact of economic activity on the environment and people. Our ambition is to further strengthen our global position by providing comprehensive support to our clients as they seek the right partners inside and outside of our organisation.

Because we are increasingly active abroad, Wageningen University & Research has a permanent office in China. This makes it easier to coordinate projects and develop new initiatives.
Sustainability
Sustainability is an important pillar in all our research and education. This is reflected in our mission: 'To explore the potential of nature to improve the quality of life'.

Sustainability also plays an important role in our business operations as we aim to be at the forefront of developments in the Netherlands in this respect. Wageningen University & Research is a climate neutral organisation, our entire carbon footprint is compensated mainly thanks to the high yields of our wind turbines in Lelystad.

Other measures we undertake to reduce our carbon footprint, are the use of geothermal heat pumps and the reduction of energy consumption in our buildings. Also Wageningen University & Research is well above the Dutch average in terms of sustainable procurement.

Our domain: Healthy food & living environment
Our 6,500 employees (5,500 fte) and 12,337 students are active within the domain of healthy food & living environment. This comprises three core fields which are strongly inter-linked:

Society and Well-being
The study of human behaviour in relation to food and living environment, lifestyle and perceptions, and focus on institutions, governance, the market and chains, and societal innovations.

Food, Feed and Biobased Production
The sustainable production and processing of food, feed and biobased products, international food chains and networks, food safety and the health aspects of food.
Our domain: healthy food and living environment
Natural Resources and Living Environment
Natural habitats, landscape, land use, the management of water, sea and natural resources and biodiversity.

Research and education combined
Wageningen University & Research is the cooperative framework of Wageningen University and the Wageningen Research Foundation, which comprises nine independent research institutes. They work together in five Sciences Groups. One department of the university is organisationally integrated within each Sciences Group together with one or more research institutes. This combination of forces allows education and research to partner in focused, high-quality projects (see the organogram on the previous page).

The combination of research, education and value creation has made us internationally successful
The work of Wageningen University & Research comprises three components: education, independent research and value creation. Translating knowledge into practical value makes us strong.

**Education**

With 19 bachelor programmes, 30 master’s programmes and six graduate schools, Wageningen University & Research is the world’s leading supplier of scientific education in the healthy food and living environment domain. Our education has a strong international focus, which is underlined by the composition of our student population. Of the total number of students, 21% are non-Dutch. In total, our students originate from more than a hundred countries, making us the most international university in the Netherlands.

Our global reputation is also demonstrated by our top position in international rankings when it comes to the research areas of society and well-being, food, feed and biobased production, natural resources and living environment. In addition to our BSc and MSc programmes, we offer training courses, distance
learning modules, in-company training options and (executive) management training to professionals in the Agri & Food sector via the Wageningen Academy (and the Centre for Development & Innovation).

**Research**

Wageningen University & Research conducts scientific research across the board in the healthy food and living environment domain. This ranges from fundamental to applied research.

### Fundamental research

Fundamental research is primarily carried out by our university scientists and, due to the nature of our work, is often highly practical. The university has 94 chair groups divided across five departments. Funding usually comes from the government or organisations for scientific research.

### Field-based research

Field-based research aimed at collecting primary data, using methods such as measurements and surveys, is primarily the domain of the independent research institutes at Wageningen University & Research. It is deployed to answer specific practical questions risen at industry, governments or in
society at large, allowing our scientists to find solutions and develop future innovations in areas such as crop production, livestock farming, animal welfare and the environment based on practical knowledge and insights. Industry is a very important client and partner in this type of research.

**Application-oriented research**
A second type of research on which the research institutes work is application-oriented. This focuses in part on the development of expertise for practical applications. It includes, for instance, the development of biobased products as an alternative to petroleum-based products; new, sustainable production systems and processes; innovations that improve the functioning of agricultural chains and applications that respond to climate change. Another component is policy support. Examples include studies into the impact of new laws and regulations or the influence of social developments on the income of farmers.

Application-oriented research is commissioned by the government, industry and non-profit organisations. It is often conducted in partnerships with governments, other research institutes and Dutch and international companies. But we also perform a lot of contract research on behalf of
specific clients. The results of public-private research are always available to the public, whereas research carried out on behalf of a private company means that publication of the results is subject to authorisation – possibly only once the parties involved have been made anonymous.

**Independence**

Clients have no influence on research conclusions, which are solely based on facts we have determined and analysed in our research. Wageningen University & Research always notes in its research reports which parties funded the research.

*We encourage the development of spin-offs, which valorise the acquired knowledge on the market*
Value creation

At Wageningen University & Research, we believe that a broad dissemination of results from our research contributes to creating added socio-economical value through novel applications. We pay special attention to the transfer of knowledge and technologies. Transfer of knowledge will, in many cases, be achieved in collaboration with industrial partners that also take care of the commercialisation of products. In other cases, new enterprises have been founded on the basis of knowledge or expertise developed in Wageningen. Value creation is provided in various ways:
- working with companies on co-creation and innovation
- working on societal challenges through dialogue with society
- contributing to government policy, legislation and enforcement
- sharing our knowledge infrastructure with businesses and organisations
- training experts to play a role in the development and application of our knowledge.

Our research themes
Five research themes encompass the entire research portfolio of our research institutes and link the institutes thematically. This increases the synergy of our knowledge development. These themes are:

- Climate change
- Circular & Biobased Economy
- Nutrition & Health
- From hunger to food security
- Biodiversity

The research institutes

Wageningen Bioveterinary Research – Top level biomedical and veterinary research for animal and public health.

Wageningen Environmental Research: For research on green growth and our living environment
**Wageningen Food & Biobased Research** – Conducts applied research for sustainable innovations in healthy food, fresh-food chains and biobased products.

**Wageningen Food Safety Research** – For research and advice regarding safe and reliable food.

**Wageningen Livestock Research** – Science-based solutions for a sustainable and profitable livestock sector.

**Wageningen Marine Research** – For ecological research into the sustainable use and protection of marine biological resources, coastal areas and seas.

**Wageningen Plant Research** – Research and innovations for sustainable & healthy food and non-food plant production, use and re-use.

**Wageningen Centre for Development Innovation** – Brings knowledge on food systems into action, by strengthening capacities for sustainable development in upcoming markets.
Strategic investment themes

In the Strategic Plan 2019-2022 Wageningen University & Research has chosen three investment themes: strategic topics with which we can emphasise specific aspects of our expertise development. The themes are: connected circularity, the protein transition and digital twins. With these Wageningen-wide investment themes we accelerate the development of knowledge and innovation in our domain.

These themes have been chosen in areas where various scientific disciplines in our domain intersect. These areas encompass urgent and relevant challenges that could benefit greatly from our unique combinations of expertise. By combining various scientific disciplines, new insights are created that facilitate considerable progress.

Connected circularity

The need is growing for circularity in separate food chains and materials segments (e.g. agriculture, food processing, consumption, waste, chemicals, materials) and at various aggregation levels. Circularity should be nature
inclusive, environmentally sustainable, economically viable, resilient, and “climate neutral”. But, individual circular systems are all connected and influence each other. We will investigate the synergies and trade-offs between individual circular systems to design connected circular systems that cross segments and aggregation levels. We aim to ensure optimal use and valorisation of renewable resources (biomass).

The protein transition
Proteins are the building blocks of life on earth. Both their quantity and quality in food play a major role in human and animal health. Currently, a significant part of proteins are consumed through animal-based products. However, our planet’s increasing demand for animal protein is outpacing our planet’s carrying capacity. We need to transition to more sustainable protein production and consumption. Plant-based proteins and new sources, like insects and seaweed, offer sustainable and economically attractive alternatives in addition to meat. This theme considers how this protein transition can be facilitated and what its biological, health and social/societal consequences, and feasibility are.

Digital twins
Humanity is increasingly building digital images of real objects. These “digital twins” are created for living objects, such as cells, plants, animals, people and ecosystems, as well as for non-living objects, for instance, food and supply chains. Digital twins are created by deploying sensors and new sensing techniques, in combination with increased data connectivity, interconnected computing systems and artificial intelligence. They can be used not only to understand, describe and analyse reality, but also to predict the future state of those objects. This technological exploration needs to be accompanied by an understanding of ethical and societal limits to its potential applications.

Examples of collaborative partnerships

• **AlgaeParc**
  This facility for micro-algae research on the edge of Wageningen Campus is financed with money received from the Dutch Ministry of Economic Affairs, the Province of Gelderland and Wageningen University & Research. The research itself is funded by users.
  [www.wur.eu/algaeparc](http://www.wur.eu/algaeparc)

• **Wageningen Shared Research Facilities**
  Wageningen Shared Research Facilities utilises facility-sharing to give access to Wageningen University & Research's state-of-the-art research facilities to researchers from all organisations.
  [www.wur.eu/shared-research-facilities](http://www.wur.eu/shared-research-facilities)

• **Top sectors Horticulture & propagating materials and AgroFood**
  Top sectors are areas in which the Dutch business community and research centres excel on a global scale. The business community, universities, research centres and the Dutch government work together on knowledge and innovation in order to continue to strengthen this position of excellence.

• **Dairy Campus**
  Educational institutions, research institutes and governmental bodies work together within Dairy Campus to create a meeting space for study programmes, work placements and graduation procedures and for research and innovative projects in the dairy sector.
  [www.dairycampus.nl](http://www.dairycampus.nl)

• **FoodValley Foundation**
  Food Valley NL works in proximity to and in cooperation with many national and international food companies and highly-respected knowledge institutes to bring knowledge and entrepreneurship together in a targeted way, thereby creating a breeding ground for further innovation from within Wageningen University & Research.
  [www.foodvalley.nl](http://www.foodvalley.nl)

• **FoodValley region**
  Regio FoodValley is a partnership between eight municipalities totalling 330,000 residents. This partnership has the goal of developing the FoodValley region into Europe's leading agro-food centre and into a leading international region for knowledge and innovation in the area of healthy, sustainable food.
  [www.regiofoodvalley.nl](http://www.regiofoodvalley.nl)
• **Wetsus**
Wetsus, the centre for sustainable water technology, is a research institute which unites the forces of the business community and leading universities and research institutes. As a top technological institute, Wetsus develops innovative, sustainable water technologies. Together with three universities, more than 40 companies – multinationals and small and medium-sized businesses – participate in Wetsus.
[www.wetsus.nl](http://www.wetsus.nl)

• **Science Shop**
The Science Shop of Wageningen University & Research mediates research questions from civic and community organisations, action groups and associations in the areas of sustainable agriculture, rural development, nature & the environment and consumers & food.
[www.wur.eu/scienceshop](http://www.wur.eu/scienceshop)

*We are well aware that our partners need to achieve genuine social breakthroughs*
Historical timeline

Wageningen University

1876
The state takes over the local council’s Agricultural College in Wageningen: the start of National Agricultural Education in The Netherlands.

1904
Wageningen education has been developed to a higher level and the institution is now called the National Higher College of Agriculture, Horticulture and Forestry.

1918
Wageningen’s status as an institute of higher education is legally ratified, and it becomes the National Agricultural College on 9 March 1918.

1919
A forestry research station is established (now part of Alterra).

1936
Establishment of the Institute for Research and Processing of Fruit and Vegetables in Wageningen (now part of Agrotechnology & Food Sciences Group).

1940
Establishment of the Agricultural Economics Institute (LEI).

1951
Establishment of PHLO (now part of Wageningen Academy).

1956
Establishment of RIKILT. The result of a merger of the National Agriculture Testing Station in Maastricht and the National Dairy Station in Leiden.

1968
From now on the Agricultural College is subject to the same law that governs other universities: the Academic Education Act.

1971
Establishment of PHLO (now part of Wageningen Academy).

1976
Establishment of RIKILT.

1986
In accordance with amendments to the Academic Education Act, the Agricultural College is now called the Agricultural University.

DLO

1877
Foundation of the first agricultural research station in Wageningen (predecessor to the current research institutes).

1888
The National Institute for Fisheries Studies is set up in IJmuiden (now part of Wageningen IMARES).

1898
Establishment of the National Agriculture Testing Station in Maastricht.
